

## Export Exchange Certificate

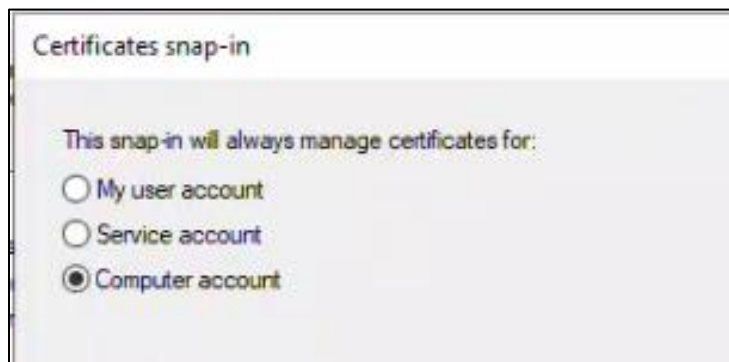

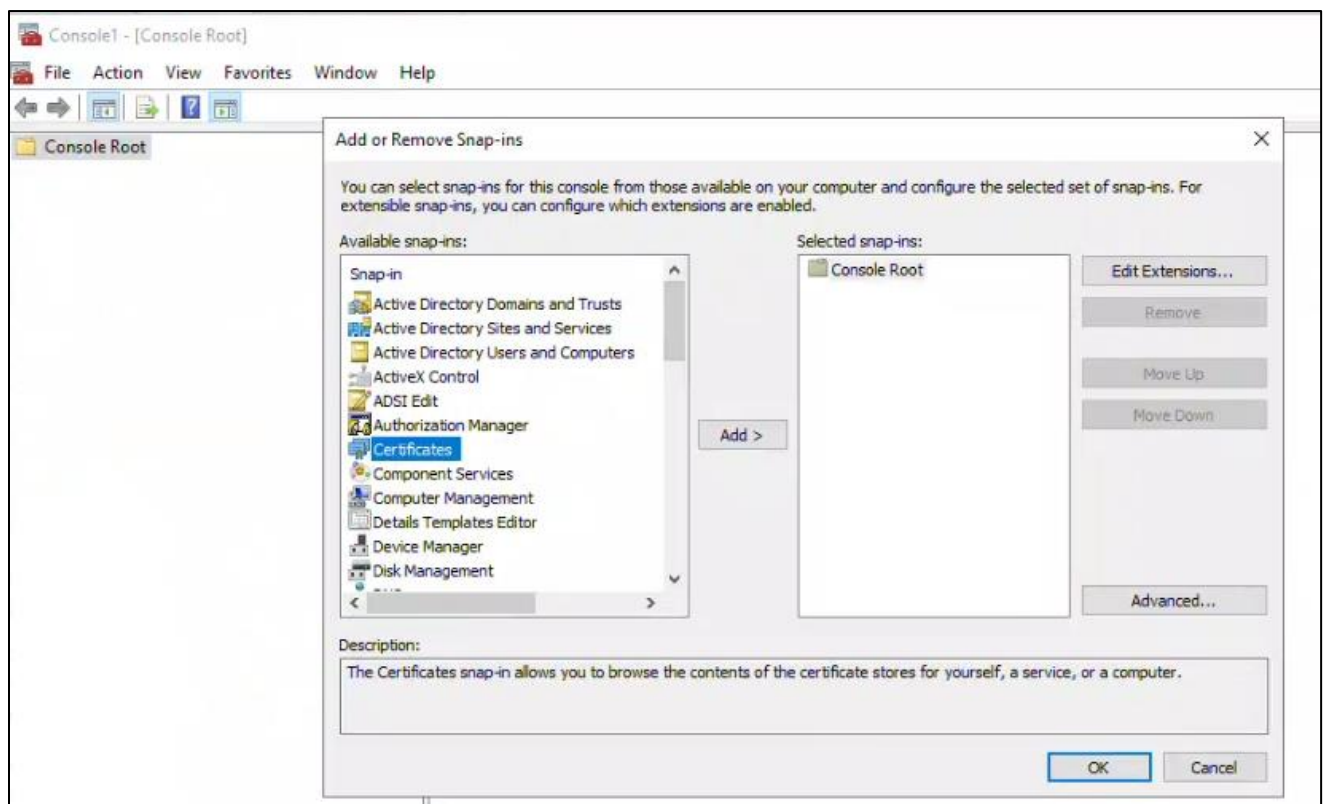

To export the Exchange Server SSL certificate and install it on a Windows 11 client, so that services like POP3, IMAP4, and SMTP with STARTTLS work without certificate warnings.

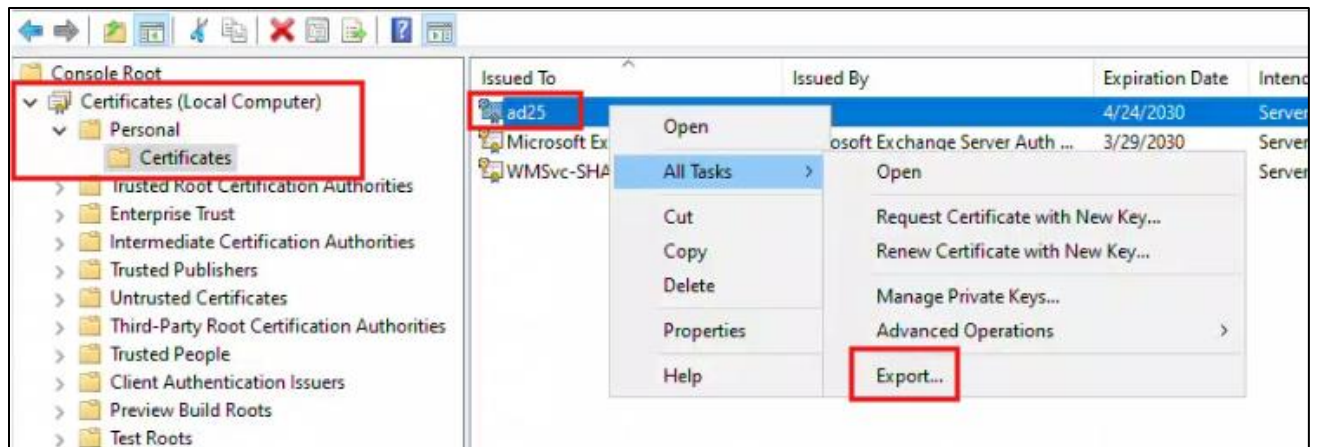

---

### Step 1: Export the Exchange SSL Certificate

#### On Exchange Server

Open mmc

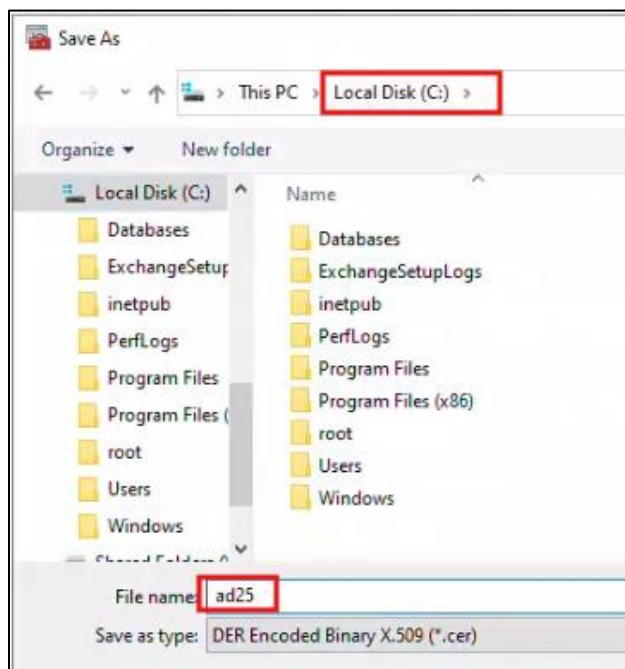

Private keys are password protected. If you want to export the private key with the certificate, you must type a password on a later page.

Do you want to export the private key with the certificate?

- ☐ Yes, export the private key
- ☒ No, do not export the private key

Select the format you want to use:

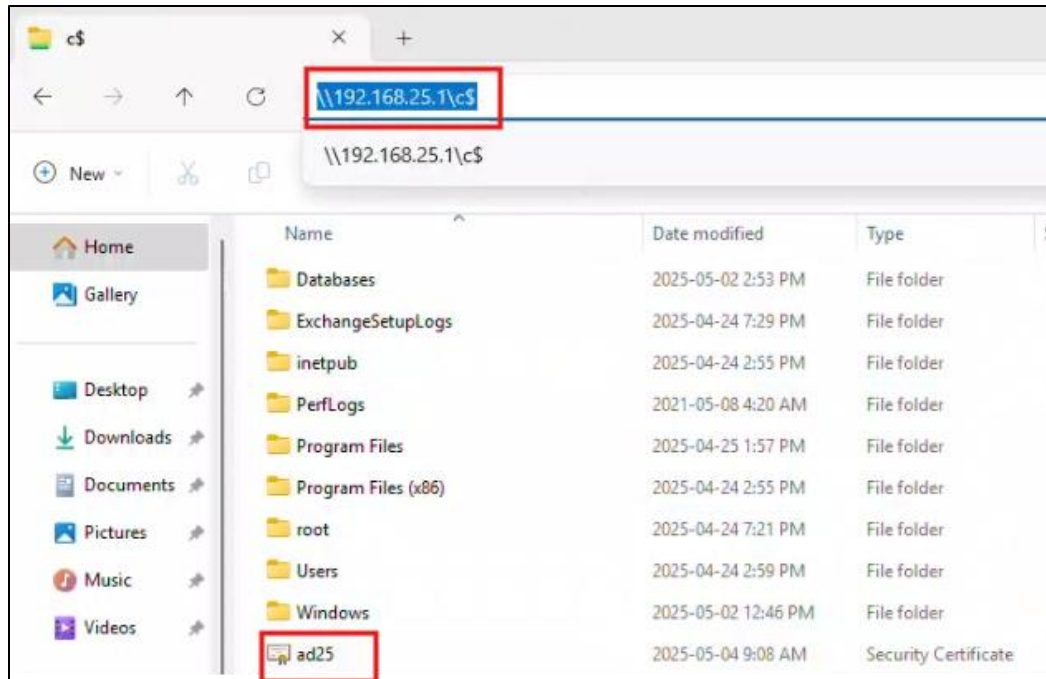

- ☒ DER encoded binary X.509 (.CER)
- ☐ Base-64 encoded X.509 (.CER)
- ☐ Cryptographic Message Syntax Standard - PKCS #7 Certificates (.P7B)
- ☐ Include all certificates in the certification path if possible

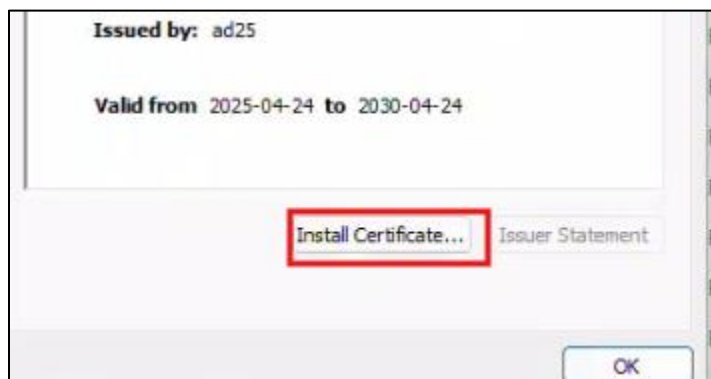

## Step 2: Transfer the Certificate to the Windows 11 Client

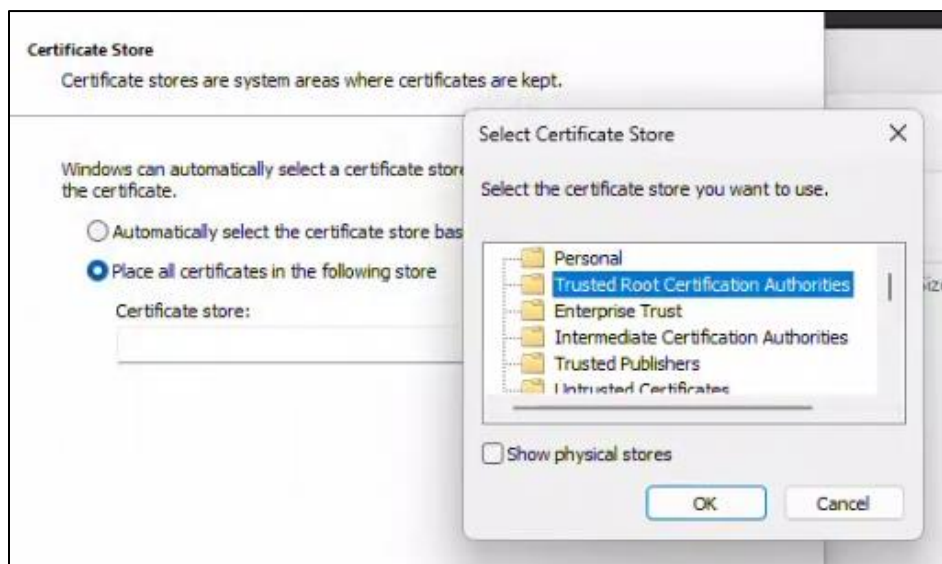

### On Windows 11

Connect to the **C\$** drive of your **Exchange Server** and double-click on Exchange certificate.

Select **install Certificate...**

## Test the certificate

Open a browser and access your **URL Exchange server by typing:**

<https://adXX.domainXX.local>

It should work without any error
